

3. Requirements Gathering

• Stakeholder Analysis

Identifying key stakeholders and understanding the needs of each group:

Regular Users (Customers):

They need access to safe, discounted meals with a simple and fast browsing experience.

Restaurants, Bakeries, Hotels (Vendors):

They need an easy web interface to upload surplus products daily and manage incoming orders.

Project Administrators (Admin Team):

They require tools to manage the system, monitor traffic and subscriptions, and ensure content quality.

Academic Team (Instructor / Evaluator):

They focus on tracking workflow, design methodology, and experience consistency across platforms.

• User Stories & Use Cases

User Stories (Examples):

- As a regular user, I want to see daily nearby deals so I can purchase food at a lower price.
- As a user, I want to save my home location so relevant offers appear automatically.
- As a restaurant/vendor, I want to upload surplus items quickly and easily before the day ends.
- As an admin, I want to track platform performance, users, and restaurants via an analytics dashboard.

Use Cases (Examples):

- The user logs in → selects their location → browses available deals → places an order → picks it up from the branch.
- The restaurant logs into the web dashboard → adds a new item → sets the discounted price → publishes it to users.
- The admin accesses the control panel → reviews vendor accounts → monitors ratings and complaints.

• Functional Requirements

Mobile App (Customer):

- Sign up & login
- Automatic or manual location detection
- Browsing deals and products
- Fast and simple ordering system
- Reward points system
- Subscription system
- Full profile page + account management
- Help center + reports/support
- Multiple payment methods

Web Dashboard (Restaurants / Vendors):

- Restaurant account registration & verification
- Add/edit/delete products
- Upload food images
- Set availability time for deals
- Track orders
- View analytics & performance
- Manage staff accounts & permissions

Admin Panel (Project Administrators):

- Manage users
- Manage restaurants
- Content review
- Subscription management
- Performance monitoring (Analytics Dashboard)

Landing Page:

- Present project concept
- Highlight key features
- CTA for restaurants to register or for users to download the app
- Contact information

• Non-Functional Requirements

Performance:

- Homepage loads within 2–3 seconds
- Fast response while browsing products

Security:

- Encrypted user and payment data
- Role-based access for vendors and admins
- Protection of sensitive information

Usability:

- Simple and intuitive interface for all age groups
- Clear and short ordering steps
- One-hand usability for mobile users

Reliability:

- Platform available 24/7
 - Handles large numbers of daily deals
 - Data persistence without loss
-
