

Project Name

ZAD

Project Idea

ZAD is a smart mobile application designed to reduce **food waste** by connecting **supermarkets, bakeries, restaurants, and grocery stores** with consumers.

It allows sellers to list products that are **close to their expiration date** or may go unsold, offering them at **progressively discounted prices** and even for free at the end of the day.

Through this approach, ZAD helps **businesses minimize losses**, provides **affordable options** for consumers, and contributes to **sustainability and community support** by reducing food waste and promoting responsible consumption

Team Members (pentaRae)

4. Mona Mahmoud

5. Asmaa Elsayed

Work Plan

1. Research & Analysis

- Audience personas :Our target audience consists of everyday users searching for affordable surplus meals nearby, and businesses such as restaurants and bakeries looking to reduce food waste and increase sales through offering discounted items.

2. Visual Identity:

The visual identity of **ZAD** defines the overall look, feel, and personality of the application.

It ensures consistent communication across all screens and creates a friendly, trustworthy experience for both customers and food businesses.

2.1 Color Palette

A clean, eco-friendly palette inspired by sustainability and freshness.

Primary colors reflect *yellow (environment)*, *green (offers & savings)*, and *neutral tones* for clarity.

2.2 Typography

Simple, modern, and easy-to-read fonts used for headings, body text, and labels, ensuring high readability across mobile screens.

2.3 Iconography

A unified set of icons representing categories like food, location, discounts, profile, and orders.

Icons follow a minimal and friendly style to match the app's tone.

2.4 Illustration Style

Soft, simple illustrations used in splash screens, onboarding, and empty states to create an approachable experience without overwhelming the user.

2.5 Logo Usage

Clear rules for using the ZAD logo, maintaining spacing, sizing, and background consistency across app and web screens.

2.6 UI Components Style

Consistent design for buttons, cards, tabs, alerts, and input fields to ensure smooth usability and a cohesive interface.

- Logo design

3. Main Designs

- Poster

4. Complementary Products

Although the direct competition in the local market is very limited, there are a few products that offer partially similar concepts. These platforms focus on food offers, delivery, or surplus management, but none of them provide a complete solution that combines **dynamic discounts**, **waste reduction**, and **free last-minute collection** the way **ZAD** does.

APP NAME	Too Good To Go	ResQ Club	Foodsi
Strong Sustainability Mission	✓	✓	✓

Flexible Pickup / Delivery	×	×	×
Pricing Clarity	×	×	×
Payment Flexibility	Credit/Debit only	Credit only	Credit only
User Engagement / Loyalty	×	×	×

5. Review & Finalization

After testing the project with a group of users and business owners, the overall feedback was very positive. Users liked the idea of finding affordable surplus food easily, and they found the interface simple and clear. Business owners mentioned that the platform helped them reduce daily food waste and promote products before they expire.

There were a few suggestions, such as improving the filters, organizing notifications better, and adding more insights for sellers in the dashboard. I took all the feedback into consideration and implemented the required adjustments.

Overall, the testing phase confirmed that the concept is truly needed, easy to use, and has very little competition in the market.

6. Final Presentation
